

Knock-Out Review

231120

Inter-Channel Team: **Aztec NV**

Official Remark:

1. A background research for any project is one of the most important aspects before carrying out a simulation. It is appreciable that you have carried out some research and studies before starting the simulation.
2. You have set an objective for the project and it has determined the entire workflow. It is a good planning and keep it up for upcoming challenges as well.
3. The construction of the report is outstanding. Within 3 pages, you have accommodated all the necessary details and provided the sources you have used too. That shows a high level of dedication and professionalism.
4. Your discussions and Conclusions are also perfect for what you have carried out in the project and it reflects your understanding of the subject.
5. You have done a very good job in this challenge but it would have been perfect if you had also provided the details of Boundary condition and Mesh.
6. Also, you could have tried the different types of supports as it was suggested on the challenge page.
7. Overall, it is a good attempt and nice presentation of the report. Continue doing the same for the upcoming challenges as well.
